Purpose

Two systems, separated by disconnected data, but used for similar interests had to be combined to alleviate pain points in users duplicated data entry of information. To help convey a high level view of the two separate systems, flow diagrams were created to strike conversation with System Analysts and Developers to gain an understanding of how disconnected systems can combine into a new web based app in a seamless flow. Issues with *one to many* & *many to many* data models combined with rules engines were discussed with these flows.

1 to 1 to 1

1 case, with 1 quote and 1 person.

1 to * to *

1 case with many people and many quotes.
