

Wireframe Steps

Information on the following pages have been modified/adjusted for confidential/proprietary reasons & to allow for public consumption

Purpose

A new process being introduced to internal users created the need to adjust wireframes for demo purposes. Modulated and granular information, including; notes, interactions and data details were removed in an attempt to validate the "Happy Path" with business stakeholders and current users during both contextual and group inquiries. The projects main purpose/goal removed the previously tedious process of manual paper splitting (i.e. printing, selecting individual pages and fax/emailing output) into a simplified and automated web based application. Those steps are outlined in the following pages.

Section 1

The following pages demonstrate the step-by-step flow for selecting and adding pages to a package for delivery. This section is purely demonstrative sample at the highest level and does not include notes, functional highlights, or granular details for interactions.
